

## VRWM 64V Uni-directional Surface Mount TVS Diode SMAJ64A, Free Protection Plan Provided

Our Product Introduction

### Basic Information

- Place of Origin: Shenzhen, Guangdong, China
- Brand Name: SOCAY
- Certification: UL, REACH, RoHS, ISO
- Model Number: SMAJ64A
- Minimum Order Quantity: 5000PCS
- Price: Negotiable
- Delivery Time: 5-8 work days

### Product Specification

- SMAJ64A Name: TVS Diodes
- Package Type: DO-214AC/SMA
- Vrwm: 64.0V
- Vbr@It (Min.): 71.10V
- Vbr@It (Max.): 78.60V
- It: 1mA
- A Vc@Ipp: 103.0V
- Ipp: 3.88A
- Ir@Vrwm: 5μA
- Application: Protection Circuit Board

## Description

The SMAJ series is designed specifically to protect sensitive electronic equipment from voltage transients induced by lightning and other transient voltage events.

## Features

- ◆ For surface mounted applications in order to optimize board space
- ◆ Low leakage
- ◆ Uni and Bidirectional unit
- ◆ Glass passivated junction
- ◆ Low inductance
- ◆ Excellent clamping capability
- ◆ 400W Peak power capability at 10 × 1000μs waveform Repetition rate (duty cycle):0.01%
- ◆ Fast response time: typically less than 1.0ps from 0 Volts to V<sub>BR</sub> min
- ◆ Typical I<sub>R</sub> less than 5μA above 12V
- ◆ High Temperature soldering: 260°C/40 seconds at terminals
- ◆ Typical maximum temperature coefficient ΔV<sub>BR</sub> = 0.1% × V<sub>BR</sub>@25°C× ΔT
- ◆ Plastic package has Underwriters Laboratory Flammability 94V-0
- ◆ Matte tin lead-free Plated
- ◆ Halogen free and RoHS compliant
- ◆ Typical failure mode is short from over-specified voltage or current
- ◆ Whisker test is conducted based on JEDEC JESD201A per its table 4a and 4c
- ◆ IEC-61000-4-2 ESD 15kV(Air), 8kV (Contact)
- ◆ ESD protection of data lines in accordance with IEC 61000-4-2 (IEC801-2)
- ◆ EFT protection of data lines in accordance with IEC 61000-4-4 (IEC801-4)

## I-V Curve Characteristics

## Physical Specifications

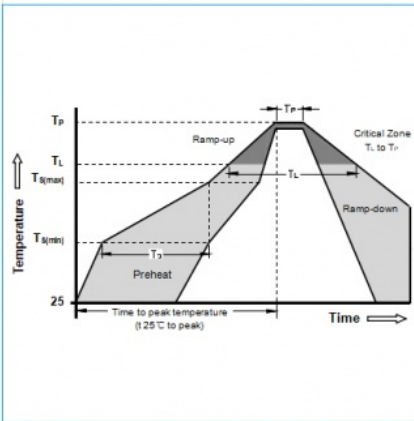

Weight	0.002 ounce, 0.061 gram
Case	JEDEC DO-214AC Molded Plastic over glass passivated junction
Polarity	Color band denotes cathode except Bipolar
Terminal	Matte Tin-plated leads, Solderable per JESD22-B102D

## Environmental Specifications

Temperature Cycle	JESD22-A104
Pressure Cooker	JESD22-A102
High Temp. Storage	JESD22-A103
HTRB	JESD22-A108
Thermal Shock	JESD22-A106

## Soldering Parameters

Reflow Condition		Lead-free assembly
Pre Heat	-Temperature Min ( $T_{s(min)}$ )	150°C
	-Temperature Max ( $T_{s(max)}$ )	200°C
	-Time (min to max) ( $T_s$ )	60 -180 Seconds
Average ramp up rate (Liquidus Temp $T_L$ to peak)		3°C/second max
$T_{s(max)}$ to $T_L$ - Ramp-up Rate		3°C/second max
Reflow	- Temperature ( $T_L$ ) (Liquidus)	217°C
	- Time (min to max) ( $T_L$ )	60 -150 Seconds
Peak Temperature ( $T_P$ )		260 +0/-5°C
Time within 5°C of actual peak Temperature ( $T_P$ )		20 -40 Seconds
Ramp-down Rate		6°C/second max
Time 25°C to peak Temperature ( $T_P$ )		8 minutes Max
Do not exceed		280°C

## Part Numbering

**SMA J x x x CA**

## Part Marking

## Packaging

Part Number	Component Package	Reel (pcs)	Per Carton (pcs)	Packaging Option	Reel Diameters (mm)
SMAJXXXXX	DO-214AC (SMA)	5000	80000	Tape & Reel -15mm/13"tape	330.0

## Tape and Reel Specifications

### 1. Application of transient suppression diodes (TVS diodes) in TN power supply systems

Overvoltages caused by human operating errors such as lightning overvoltage waves and load switches can easily invade the interior of electrical and electronic equipment through power supply lines, causing electrical and electronic equipment failure, malfunction, and even permanent damage to the equipment, causing serious economic losses. By installing surge absorbing devices MOV and TVS on the power line, two-level protection is implemented, and common mode and differential mode protection are performed on the L and N lines. The specific method is to install MOV at the front end of the line as the first level SPD protection to discharge most of the lightning current, and install a high-power transient suppression diode (TVS diode) at the end of the line (front end of the equipment) as the second level SPD protection to further weaken the The overvoltage wave amplitude reduces the grid voltage to within the E/I safe withstand voltage range. It should be noted that MOV and TVS should achieve coordination and cooperation of voltage and energy, and the line length between AB should not be less than 5 m. Otherwise, the line length should be increased or decoupling devices should be installed.

### 2. Application of transient suppression diodes (TVS diodes) in network signal lines

Transient suppression diodes (TVS diodes) can not only be used for surge protection of power systems, but also for surge protection of signal lines. Gas discharge tubes GDT and transient suppression diodes (TVS diodes) are combined to form signal surge protection. The device is characterized by fast response, small leakage, almost no signal loss, and can provide safe and reliable protection for high-speed network lines.

### 3. Application of transient suppression diodes (TVS diodes) in DC power systems

In the power supply circuit of an ordinary PC computer, the mains AC 220 V is stepped down to AC 20 V through a transformer, and then modulated and rectified by the circuit to output DC 10 V DC power and connected to the load. By installing a bidirectional transient voltage suppressor TVS1 at the output end of the transformer, it absorbs the instantaneous impulse pulse current of the L and N lines and clamps the circuit voltage at a safe voltage level. TVS1 can protect the back-end rectifier and other circuit components of the transformer. A unidirectional transient voltage suppressor TVS2 is installed at the output end of the DC power supply after the rectifier to protect the DC load from overvoltage and current impacts.

### 3. Application of transient suppression diodes (TVS diodes) in transistor circuits

As a current control device, transistors are an important part of electronic integrated circuits. They can be divided into two categories: NPN transistors and PNP transistors [5]. They are used in switching circuits, amplifier circuits and voltage stabilizing circuits. In order to protect the transistor circuit from surge voltage interference such as ESD/EFT (electrostatic discharge/electrical fast transient pulse group), TVS1 and TVS2 are added to the input and output ends of the circuit respectively for protection.

**we are manufacture and supplier of varies passive components**
